# Logix Genetiese Katalogus

Die Seleksie Waardes in hierdie verslag dui die genetiese meriete van diere aan – alle omgewings-effekte is uit die waardes verwyder. Seleksie waardes is 'n kombinasie van relevante teelwaardes. Die inligting is gebaseer op diere wat wetenskaplik korrek en presies gemeet is volgens internasionaal aanvaarbare metodes. Teelwaardes word beraam uit verskillende bronne van inligting: voorouers, eie prestasie en nageslag.

## Maklike interpretasie van Seleksie Waardes:

- Gemiddeld van lewendige diere in die hele ras: 100
- Bokant 100: meer gewenste rigting,
- Onder 100: minder gewenste rigting

| Seleksie waarde  | Wat meet dit?                                                                                                                             | Notas                                                                                 |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Koei Waarde      | Genetiese meriete om dogters te teel wat vrugbaar is, maklik kalf, swaar kalwers speen, baie melk het terwyl onderhoud behoeftes laag is. | Kombinasie van die sub-waardes Kalfgemak, Melk, Kalfgroei, Onderhoud en Vrugbaarheid. |
| Groei Waarde     | Bulle / Koele se genetiese meriete vir groei en groei-doeltreffendheid na speen.                                                          | Die diere se genetiese vermoë vir groei in een waarde opgesom.                        |
| Produksie Waarde | Kombinasie van Koei waarde en Groei waarde.                                                                                               | Een enkele waarde wat die genetika van die diere opsom.                               |

## Akkuraatheid (Akk):

Die hoeveelheid inligting beskikbaar vir teelwaarde beraming word aangedui met die **akkuraatheid (Akk)**. Hoe nader aan 100, hoe meer inligting. Jonger diere het laer akkuraatheid as ouer diere.

Inligting wat gebruik word, is 'n kombinasie van die volgende:

- **Ouers:** bekend, akkuraatheid van ouers se teelwaardes
- **Eie meting:** Dier self gemeet vir eienskap of gemeet vir geneties gekorreleerde eienskap
- **Nageslag:** Aantal nageslag gemeet vir eienskap of gekorreleerde eienskappe

## Wye interpretasie van Akk:

Akk > 80%: Baie inligting. KI bul,

baie nageslag

Akk > 60%: Dier het gemete

nageslag

Akk > 30%: Dier gemeet

Akk < 30%: Min inligting

| Sub Waarde   | Wat beteken 'n waarde bo rasgemiddeld (100)?                            |
|--------------|-------------------------------------------------------------------------|
| Kalfgemak    | Kleiner kalf by geboorte – makliker kalwing                             |
| Melk         | Koele met meer melk en beter moeder eienskappe                          |
| Kalfgroei    | Swaarder kalf by speen as gevolg van groeikragtigheid van die kalf self |
| Onderhoud    | Diere met laer behoeftes vir onderhoud (laer Volwasse gewig EBVs).      |
| Vrugbaarheid | Koele / dogters wat vroeër en/of meer gereeld kalf.                     |
